

Magellan® eXplorer® 310

Rugged Handheld GPS Device

North America

PRELOADED MAPS:

World Edition

Includes a detailed road network, land areas, transportation points, and water features of more than 200 countries.

Essential Outdoor Navigation

The Magellan eXplorer 310 GPS receiver comes packed with tons of helpful features and is ready to use right out of the box.

The pre-loaded World Edition map includes a complete road network in the United States, Canada, Western Europe, and Australia and major roads throughout the rest of the world. This unique map also includes water features, urban and rural land use, and city centers. Regional versions of Magellan's Summit Series topographic maps are available for download to expand mapping coverage and level of detail.

A vibrant, transfective color screen allows for the best readability in direct sunlight. To zero in on the exact location of a geocache, favorite fishing spot, or the next summit, the SiRFstarIII GPS chipset provides accuracy of 10-15 feet (3-5 meters). To keep your outdoor adventure going all day long, the device is powered by two AA batteries for 18 hours of constant usage. The eXplorer 310 is rugged, waterproof, and submersible (IPX-7). All of this is packed into a small and attractive handheld form factor that can be hung around your neck with the optional eXplorer lanyard or attached to your pack with the built-in carabiner hook.

The eXplorer 310 provides unmatched assistance with navigation, such as the combination of the world's two most useful navigational tools - a compass and a map! Overlay a series of different transparent compass styles on top of the World Edition map. Access the dashboard screen that shows a mini-compass for quick reference and customizable navigation data fields, such as latitude, longitude, heading, bearing, distance to end, trip odometer, and many more. Go back to the map screen and view your active track, which is a series of digital breadcrumbs to record all your movements. Mark your starting point (car, trailhead, parking lot, etc.) with a waypoint and easily navigate back to that location at the end of the day.

The eXplorer 310 supports paperless geocaching, which allows you to download more than 20 unique characteristics of each cache, including name, location, description, hider, size, difficulty, terrain, hint, spoilers, attributes, and last 20 user logs among a number of other details.

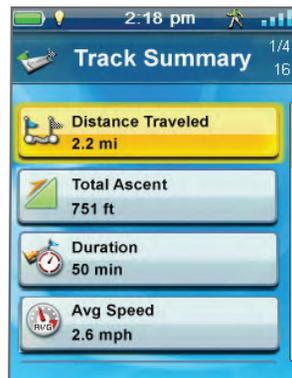

Reference your track summary to keep track of your distance travelled, elevation gained or lost, complete travel time, moving time and stopped time, and average time to find. Easily reset your track summary statistics to track the details of your next outdoor adventure.

No matter where you enjoy the outdoors, the eXplorer 310 GPS receiver will provide precise GPS signals thanks to the Satellite Based Augmentation Systems (SBAS) of WAAS, EGNOS, and MSAS; display coordinates in a myriad of different global systems, including UTM and WGS84; and accurately guide you to and from your next adventure, where ever in the world that may be!

Waterproof handheld GPS receiver with core outdoor navigation features, expandable mapping, and paperless geocaching

A simple main menu, intuitive contextual menus, and vibrant graphics make this device easy to use.

The track summary screen allows you to quickly reference 16 statistics, including distance traveled and average speed.

Magellan eXplorist 310

Set-up information: Gift Box

Marketing Part #	CX0310SGXNA
